Helmet VERTEX VENT HI-Viz, Petzl

Product information

Highly visible, comfortable and ventilated helmet

VERTEX VENT helmet is incredibly comfortable, thanks to its six-point textile suspension and CENTERFIT and FLIP&FIT systems. These guarantee that the helmet fits securely on the head.

Adjustable-strength chinstrap makes it ideal for working at height and on ground. The ventilation holes with sliding shutters, allow good airflow through the helmet.

In combination with optional accesories such as a Petzl headlamp, hearing protection, and other multiple accessories, makes it an entirely modular helmet, thus responding to the specific additional needs of professionals.

High visibility version features a fluorescent outer shell with phosphorescent clips and reflective bands for optimal visibility of the worker – day or night.
