Lifting Solutions Group
Axel Johnson International

Inspection

Product information

Certex perform annual inspections of lifting equipment, lashing equipment and fall protection products.
Inspection of lifting equipment and safety equipment for work at height must be carried out at least once every 12 months
Inspection can be done either at your place or in our well-equipped workshops.

Inspection includes:

- visual inspection
- load testing if required
- replacement of the marking mark
- inspection certificate

All lifting equipment and aids must be marked with information about the inspection carried out.
Check the label on your equipment before use!
