

Secu-Stick, Top part for Multi-Stick Forankra

Product information

Forankra's newly developed Multi-Stick is a tool that makes the truck driver's cargo securing ergonomic, safer and more efficient. Multi-Stick can be used in most situations where it is difficult to access different areas due to height or distance, such as placements of lashings or corner protection.

With the Secu-Stick top part the driver can remain on the ground when handling and positioning the lashings, corner protections or tarpaulin slats (max width 1,2 m) in an easy and ergonomic way. The Secu-Stick top part is used together with the Multi-Stick telescopic handle.

Material: Aluminium-steel
