Seat PODIUM

Product information

The PODIUM work seat allows work-at-height and rope access technicians to sit when suspended in their harness for long periods of work, providing additional comfort. It features three equipment loops and is easily adjustable, with DOUBLEBACK buckles. It can be connected to the harness with T-BARs, which can be attached directly to the shackles, or with connectors or accessory carabiners such as the MINO.

Comfort for prolonged periods of suspension:

- Wide seat provides excellent stability
- Rigid sides prevent the webbing straps from compressing thighs

Three ways to connect to a harness:

- Directly to the shackles with T-BARs
- Using accessory carabiners (MINO)
- Using connectors on the loops at the end of the webbing

Convenient and sustainable:

- The straps are easy to adjust with self-locking DOUBLEBACK buckles
- It has three pre-shaped equipment loops with a protective sheath that help balance the weight
- Each equipment loop can hold up to 25 kg
- Covering can be replaced and metal plate can be reused (covering available as an accessory)
