

Toggle Chains for Sheet Pile Sections

Product information

The toggle chain is a lifting chain designed for lifting, moving and positioning sheet pile sections. The toggle is guided through the sheet pile hole and unfolded to create a secure connection, enabling controlled handling during suitable lifting operations. Available in multiple configurations and load capacity options, it can be selected to match different sheet pile handling requirements.

Best used for:

- Lifting and positioning sheet pile sections on construction sites
- Civil engineering and infrastructure projects involving sheet piles

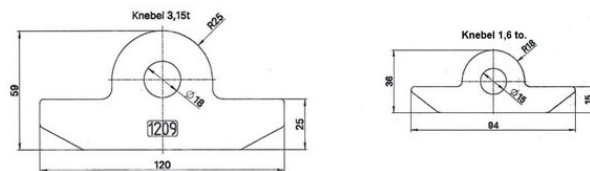

Product benefits:

- Toggle connection attaches through sheet pile holes
- Grade 80 steel construction for industrial lifting applications
- Available with direct toggle, A-link, or dual-toggle configurations
- Multiple load capacity options suit different handling requirements
- Supports controlled lifting, moving, and positioning operations
