Mobile Standard Aluminium Gantry Crane ASB

Product information

The ASB Mobile Standard Aluminium Gantry Crane is a modular, portable lifting system designed for demanding lifting applications where higher load capacities and mobility are required. Available with Working Load Limits (WLL) from 500 kg to 3000 kg, it provides a flexible solution for lifting operations and can also support fall protection and rescue systems when used with compatible equipment and in accordance with the manufacturer's instructions.

Best used for:

- Heavy-duty maintenance, installation, and lifting tasks in industrial facilities, construction sites, and utility infrastructure.
- Temporary lifting applications in wells, reservoirs, silos, lift shafts, rooftops, wastewater facilities, and other confined or remote work areas.

Product benefits:

- Aluminium construction combines high strength with reduced transport weight.
- Modular, tool-free design enables fast assembly and straightforward relocation.
- Configurable beam lengths and adjustable height suit a wide range of workspaces.
- Beam lengths from 2 to 9 m accommodate different working requirements.
- Suitable for lifting operations and compatible rescue or fall protection systems when correctly configured.
- Protection for maximum five people at the same time.

Safety factor for lifting loads: 2.1:1
Safety factor for personal rescue: 10:1
