H-bar Spreader Beam PALH

Product information

The PALH H-bar spreader beam is a fixed lifting beam designed for multi-point load handling where improved load stability and low headroom are required. Its H-bar configuration with four articulated lifting points helps distribute loads more evenly during lifting operations while supporting the use of synthetic slings, wire ropes, and similar lifting accessories.

Best used for:

- Lifting long, bulky, or unbalanced loads requiring four lifting points
- Industrial manufacturing, fabrication, logistics, and maintenance environments with restricted headroom

Product benefits

- Four articulated rotating hooks improve load positioning flexibility
- Forged safety latches help secure lifting attachments during handling
- Low headroom design supports lifting in space-restricted areas
- Tear-resistant eyelets accommodate slings, cables, and lifting assemblies
- Delivered with user's and maintenance manual and EC certificate of compliance
