

Aluminium Cylinder HLJ 50 A 10

Product information

General:

- Single acting, air (6 bar) return aluminium cylinder.
- Standard with High Flow female coupler A 118, tilting saddle and two carrying handles.
- Aluminium cylinders offer an easy to handle alternative to steel.
- They should last a lifetime of use in average heavy duty lifting applications.
- However, contrary to steel, specific limitations should be taken into account due to aluminium's lower finite fatigue life.
- Aluminium cylinders should NOT be used in high cycle applications.
- Aluminium cylinders obtained from Holmatro are designed to safely withstand up to 5,000 cycles at their maximum working pressure.

Standard supplied with: High Flow female coupler A 118 Tilting saddle

Available on request: Cylinders manufactured in conformity with customer specifications

Material: Aluminium
